\$40.99

Mastering Chemistry has been completely rewritten to embrace the new syllabus changes which have taken place since the first edition was published. It contains all the essential information needed to master Chemistry. The book is presented through a progression of topics, beginning with simple concepts and ideas, e.g. the nature of matter and its organisation in the structure of the Earth and its atmosphere. The topics then move on to more complex concepts such as atomic structure and the nature of chemical reactions, their uses in industry and the implications to the environment. Each chapter begins with a list of objectives to help the reader focus. Questions are asked throughout the book to help develop skills and each chapter ends with a summary to help aid revision.

## TABLE OF CONTENTS

The States of the Matter  
The Earth and the Atmosphere  
Investigating Substances  
Atomic Structure  
Bonding  
Representing Reactions  
The Periodic Table  
Metals  
Non-Metals  
Aqueous Chemistry  
Acids, Bases and Salts  
Quantitative Chemistry  
Electrochemistry  
Rates of Reaction  
Organic Chemistry  
Chemistry in Industry

## FEATURES

- Clear and concise, ideal for the reader requiring an introduction to Chemistry
- Contains questions throughout to check knowledge and understanding
- Focuses on the learning objectives which are found in each chapter
- Uses endofchapter summaries to help revision
