

Contents

<i>Preface</i>	<i>xi</i>
1 Business and maths – what’s the link?	1
1.1 Why do I need this book? Business without maths	2
1.2 How to learn mathematics	3
Insight from the experts	3
What kind of learner are you?	4
Lose the label!	5
A short list of tips for studying maths	6
1.3 The language of mathematics	6
1.4 Spreadsheets and calculators	8
1.5 ... and a word about the Web	9
2 Arithmetic – working with numbers	11
2.1 Why do we need arithmetic?	12
2.2 The spectrum of numbers	12
2.3 Arithmetic with whole numbers	14
Positive whole-number arithmetic	14
Arithmetic with negative whole numbers	14
Combinations of arithmetic operations	15
Zero – a special number	16
Notation and terminology	16
2.4 Fractions and their arithmetic	18
Writing and talking about fractions	18
Adding and subtracting fractions	19
Multiplying fractions	20
Dividing fractions	20
2.5 Using decimals	21
What are they and why do we need them?	21
An alternative notation	23
Adding and subtracting decimals	23
Multiplying decimals	24
Dividing decimals	24
Multiplication and division by powers of 10	25
Moving between fractions and decimals	25
Is all this really necessary?	25

Contents

2.6 Accuracy and rounding	26
How accurate do numbers need to be?	26
How can we specify the accuracy we require?	27
Rounding with calculators and spreadsheets	27
2.7 Making sense of percentages	28
What are percentages?	28
Calculating percentages	29
What you can and can't do with percentages	29
Percentages with your calculator	31
Interchanging decimals, fractions and percentages	31
2.8 Some new arithmetic operations	32
2.9 Putting it all together	32
2.10 For Excel users	33
3 Introducing algebra	35
3.1 Why do we need algebra?	36
3.2 Writing and simplifying algebraic expressions	39
Some basic principles	39
Powers and roots	40
3.3 Brackets	44
What are brackets for?	44
Removing brackets	46
3.4 Putting it all together	47
3.5 For Excel users	49
4 Graphs	53
4.1 The importance of relationships	54
4.2 The basics of graph plotting	54
4.3 Linear relationships and their graphs	57
An example of a linear relationship	57
The general equation of a straight line	59
More about linear graphs	60
Some business applications of linear graphs	61
4.4 Some important nonlinear relationships	65
Parabolas and quadratic expressions	65
Inverse proportion and hyperbolas	68
Other types of graph	69
Some terminology and notation	71
4.5 Putting it all together	72
4.6 For Excel users	73
To plot a graph from an algebraic expression using Excel	73
5 Solving equations	77
5.1 Equations in practice	78
Example 1: How much should we charge?	78
Example 2: How long will we have to wait?	78
5.2 Solving linear equations	79

Contents

Some general principles	79
Solving the equation	80
Good and bad practice	81
The link with graphs	82
A further example	82
5.3 Solving quadratic equations	83
Using the formula	83
The link with the graph	85
Some more examples	86
Higher order equations, and some terminology	87
Applying the theory	87
5.4 Solving simultaneous equations	89
What are simultaneous equations?	89
Solving simultaneous linear equations	90
The graphical interpretation	93
Some odd cases	94
More complex simultaneous equations	95
5.5 Working with formulae	95
5.6 Handling inequalities	97
What are inequalities?	97
Linear inequalities and their graphs	98
5.7 Putting it all together	101
6 Introducing calculus	105
6.1 Growth, decline and rates of change	106
6.2 Finding the slope of a graph	107
6.3 The idea of differentiation	108
A specific example	108
The general rule	110
Notation and terminology	111
6.4 Some rules for differentiation	112
6.5 Differentiating more than once	113
6.6 Finding maximum and minimum values	114
Defining local maximum and minimum points	114
Distinguishing between maxima and minima	115
6.7 Putting it all together	118
6.8 For Excel users	119
7 Solving practical problems with mathematics	123
7.1 Introduction	124
7.2 A financial question	125
The problem	125
What do we know?	126
Formulating the problem	126
Solving the equation	127
Interpreting and checking the answer	128
7.3 Some general principles	128

Contents

7.4 A depreciation problem	129
7.5 A stock-control problem	131
7.6 Conclusion	134
8 Statistics: organising data	137
8.1 What is statistics?	138
8.2 Data and where to find it	139
8.3 Types of data	141
Qualitative and quantitative data	141
Some terminology	142
8.4 Presenting data using tables	142
Tabulating qualitative data	143
Tabulating quantitative data – frequency tables	144
8.5 Presenting data using diagrams	147
Diagrams for qualitative data	147
Diagrams for quantitative data	150
Other statistical diagrams	153
8.6 Putting it all together	154
8.7 For Excel users	156
Constructing tables using Excel	156
Statistical diagrams with Excel	158
9 Statistics: summarising data	167
9.1 The need to summarise data	168
9.2 Measuring the typical value	169
The (arithmetic) mean: definition	169
The arithmetic mean: calculation	170
The median	172
The mode	173
9.3 Measuring the spread	175
The standard deviation: definition	175
The standard deviation: calculation and interpretation	177
The quartiles	178
The range	179
9.4 Choosing a measure	179
9.5 Putting it all together	180
9.6 For Excel users	183
Appendix 1: Solutions and hints	187
Appendix 2: Glossary of technical terms	225
<i>Index</i>	229
<i>Index of symbols and Greek letters</i>	235
